

Release Notes

The build date is shown in the *About* window selected from the *Help* menu.

Date	Type	Description
July 4th, 2008	Kit	4.0 SP4 released
June 14th, 2008	Kit	4.0 SP3 released
June 10th, 2008	Change	Applied 30 second send / receive timeouts to the IP Server (used by DM780 for radio control).
	Add	Added logfile <i>HRDIPServerLogfile.txt</i> to the IP Server, file is saved in the executable folder.
June 6th, 2008	Fix	Google Earth interface now uses correct file syntax.
	Fix	DX cluster was looping on incorrectly formatted spot data when using the DX cluster client (e.g. connected to GB8MBC).
	Change	Increased internal DX cluster read buffer size to 64k.
May 31st, 2008	Kit	4.0 SP2 released
May 25th, 2008	Fix	Improved radio communications thread blocking by adding a no-op request. Previously the blocking routine was not working correctly so a current read/write to the radio could be interrupted causing timeouts and possible lockups.
May 17th, 2008	Add	K3 added AM and FM to modes dropdown button.
May 14th, 2008	Fix	TS-2000 memory channel names now correctly limited to 7 characters even though the programming info for MW states that 8 characters is the maximum.
